

Silicon Valley Clean Energy

Presents a talk on

Building Decarbonization

Featuring Panama Bartholomy

Date: April 10, 2019
Time: 6 p.m. - 7 p.m.
Location: Cupertino Community Hall
10350 Torre Ave, Cupertino, CA 95014

Residential buildings produce roughly two-thirds of the state's building emissions, and commercial buildings produce around one-third. California must rapidly implement a plan to cut pollution from homes and buildings, or risk locking in emissions that will threaten the state's climate goals.

Please join Silicon Valley Clean Energy as they host Panama Bartholomy for an inspiring discussion about building decarbonization and how the Building Decarbonization Coalition statewide campaign aligns with SVCE's building electrification initiatives.

Panama is Director of the Building Decarbonization Coalition, a multi-sector forum creating solutions to our pollution-intensive building stock. Panama has worked on climate solutions in over 30 countries, and presented and collaborated on projects for the United Nations, International Energy Agency and the European Commission.
