

Prepare Your Property for the EV Future With No-Cost Support

FutureFit Assist: EV Charging for Small- and Medium-Sized Businesses

Silicon Valley Clean Energy has launched a program to support the deployment of electric vehicle (EV) charging stations at participating local small- and medium-sized commercial properties at no cost to you. The program includes free technical assistance, rebate application coaching and help choosing the right EV charging stations for your business. Make a plan now and invest when you decide it is the right time.

What Are the Benefits of Having EV Charging Stations?

EVs are good for the environment and good for business. Along with increasing employee satisfaction and giving employees and customers an option to charge their vehicles throughout the day, the benefits of adding EV charging stations include:

- Leverage state rebates to build property value
- Draw high-value customers to your business
- Attract and retain employees
- Demonstrate leadership to customers
- Help reduce emissions in our region

How Will Silicon Valley Clean Energy Help With My Project?

Silicon Valley Clean Energy will be there every step of the way. When you work with us, you will receive these complimentary benefits:

- A streamlined design, planning and construction process
- Assistance with selecting the most appropriate equipment and support with applications for available rebates
- Free technical assistance provided by Silicon Valley Clean Energy's partner, CLEAResult, throughout the planning and installation process
- Referrals to qualified contractors

Your Customers Want EV Charging, We Can Help

EV sales are gaining traction, which has expanded the need for EV chargers throughout the day for workplace charging. If your business is looking to expand into the sustainable future, Silicon Valley Clean Energy is here to help.

Free Technical Assistance

Silicon Valley Clean Energy will provide free technical assistance for your EV charging station project through its program partner, CLEAResult. This includes:

- **Site visit.** A field technician will conduct an onsite evaluation of your facility and will provide you with a Charging Evaluation (CE).
- **Load analysis.** The CE will include a load analysis that specifies the number of chargers that can be supported by your current electrical infrastructure.
- **Site layout.** Included in the CE will also be a proposed parking layout, which provides a baseline for program contractors to prepare price bids and designs.
- **Contractor bids.** We will help create and publish bid documents as well as help you assess each bid to ensure you choose the right bid and contractor.
- **Permit support.** After a bid has been chosen, we will coordinate with your contractor to support the successful navigation of the permitting process.
- **Installation process.** Program staff will offer continued support throughout the installation period.
- **Rebate assistance.** Once your project has been planned, we will help you to apply for any available rebates.
