Ready to live in a home that's more comfortable and healthier for your family and the planet? Electric appliances can make that a reality.

WHAT ARE THE BENEFITS?

**Make Home More Energy Efficient**

Today's electric appliances need less energy to do their job. In some cases, new appliances are 3-5 times more efficient than their gas counterparts.

**Improve Indoor Air Quality and Safety**

Appliances that burn natural gas or propane can create indoor air pollution, such as carbon monoxide. Electric appliances don't have these kinds of unhealthy emissions and may be safer in the event of a natural disaster, like an earthquake.

**Reduce Your Energy Bill**

Because they use less energy, switching to electric appliances could save you up to $500 a year.

**Help The Environment**

Phasing out fossil fuels will support California's clean energy goals and reduce your climate impact for years.

**Make Home More Energy Resilient**

Almost all new gas appliances rely on electricity to operate. Consider using an electric backup system for your home, such as a battery and solar panels, to retain power in a blackout.

**TESTIMONIAL**

“Our new heat pump system heats (and cools!) quickly and is super quiet and energy efficient. We are much more comfortable year-round...summer in the attic [is] no longer to be feared!”

- Javier, Palo Alto
GET STARTED
As with all home renovations and upgrades, it’s always good to speak with a contractor before installation.

Converting your home to all-electric does not need to happen all at once. Often, you can upgrade a few systems without upgrading your electric panel. Consider battery storage and solar panels to stretch your dollar even further.

Visit SwitchIsOn.org to learn more about all-electric technologies and their benefits, and to find rebate programs in your area.
